

[Exchange 2019] Modify DNS Records for Your Domain Name

1. Modify the MX records

Remove any existing MX records and add the following 2 new MX records:

Type: MX
Value: mx1.iedgmail.com
Priority: 10
TTL: 3600

-

Type: MX
Value: mx2.iedgmail.com
Priority: 10
TTL: 3600

2. Modify the TXT record

Remove the existing TXT record and add the following new TXT record:

Type: TXT
Name: @
Value: v=spf1 include:spf.iedgmail.com -all
TTL: 3600

3. Create a new A record

Create an A record and point it to the IP address:

Type: A
Name: autodiscover
Value: 173.46.152.170
TTL: 3600
